

Mechanical fastening of the roofing membrane with the b/s/t field fastening system to the - substrate

Quantity: pieces

Area: m²

Supply and install fastening elements consisting of a plastic retaining plate, color:....., with a specially corrosion-protected screw. Length and design must correspond to the roof structure.

Installation must be carried out in accordance with the processing guidelines of b/s/t GmbH. Fasteners must be positioned according to the fastening grid specified in the project-specific technical report by b/s/t GmbH.

The number and spacing of the fasteners are calculated by b/s/t GmbH based on DIN 1055, the current state of the art, and the product-specific design loads, depending on the roof substrate, and presented in a technical report.

For renovation projects, the quality of the roof substrate must be checked before the technical report is prepared.

Quantity of fastening elements will be determined by b/s/t GmbH during the quotation phase.
