

b/s/t Solar Fasteners for Securing Photovoltaic Systems on Flat Roofs Against Wind Uplift

Quantity of b/s/t Solar Fasteners: pieces

The b/s/t solar fastener is suitable for flat roofs with PVC or EVA roofing membranes. Supply and install the fasteners, consisting of a solar bracket with a specially corrosion-protected screw, length and design according to the roof structure, and a connecting element according to requirements and substructure. Installation must be carried out according to the b/s/t installation instructions.

The number and spacing of the fasteners are calculated based on DIN 1055, current best practices, design loads depending on the roof substrate, and the project-specific information in the corresponding data sheet.

The data sheet for calculation by b/s/t is available for download at www.bst-gmbh.de.
